DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: The prior art shows an adjustable handle having an operating lever, cylindrical or prismatic body, tightening member, and a bushing (Winkler '919, Winkler '100, Boyer). The prior art further shows the cylindrical or prismatic body and the tightening member to have fellow toothings in reciprocal engagement by a spring, and check element or push button having a seat for engagement of a mounting/removal tool (Winkler '919, Winkler '100). The prior art fails to show all of the above elements where the check element, which comprises a push button, is fixed against rotation in both directions relative to the tightening member. In the Winkler patents, the check element is threadably engaged with the tightening member, so that it is not fixed against rotation in both directions relative to the tightening member. By rotationally fixing the check element/push button relative the tightening member a mounting/removal tool may be used in the seat of the check element/push button to affect mounting/removal of the handle, whereas in the Winkler patents, a tool operated in the seat may act to unscrew the check element from the tightening member.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
